Command injection vulnerability in settingscamera.php in FLIR AX8 up to 1.46.16

Description

Command injection vulnerability in /usr/www/application/models/settingscamera.php in FLIR AX8 up to 1.46.16 allows attackers to run arbitrary commands via the value parameter.

Note:

This vulnerability is a backend issue that requires obtaining cookies. It can exploit the unauthorized access vulnerability for arbitrary user registration found at /tools/test_login.php?action=register. After registering a new user, cookies can be obtained to achieve RCE (Remote Code Execution).

Also.Under normal circumstances, it has a weak password vulnerability with default account credentials being 'admin' for both user and password too. You can also obtain a cookie through this method.
